## EDUCATION

**John Jay College (CUNY)**, Computer Science and Information Security B.S.

May '21

Major GPA: 3.52

---

## TECHNICAL SKILLS

- **Languages:** Python, JavaScript, Swift, C++, SQL
  - **Technologies:** HTML, CSS, Xcode IB, Node.js, Express.js, React.js, Redux, Typescript, MongoDB, AWS, Parse, MySQL, Flask, git, Figma, macOS, Linux
- 

## PROFESSIONAL EXPERIENCE

**JPMorgan Chase | Virtual Software Engineer Intern** | Remote

December '20 - Jan '21

- Familiarized with the JPMorgan Chase framework and applied technical skills to handle requests from the firm's trading floor to analyze and visualize data.
- Resolved errors with client data feed Python scripts by making the required adjustments.
- Debugged and modified React and Typescript trading applications to behave in the expected manner with a 13% increase in rendering time.

**Osamil Gastropub | Bartender** | NYC

April '17 - July '20

- Compiled a manual for best practices and crafting recipes which was used as a general resource for all bartending staff of 5 with 100% positive feedback.
- 

## PROJECT WORK

**Rocketship** | *React.js, Express.js, MongoDB, AWS, Plot.ly, Polygon.io*

- Currently collaborating with a team of 4 to develop a stock trading sandbox web application where users can trade with virtual cash and stocks.
- Developed a data history visualization component utilizing Ploy.ly and Polygon.io to graph stock and portfolio data by recent year, month, and day.
- Built a backend using Express.js with a MongoDB database with AWS Cognito for user authorization.
- Coordinated weekly sprints and Asana tasks in accordance with Agile methodology.

**Rootify** | *Swift, Xcode IB, Parse, Plant.id*

- Collaborated with a team of 3 to develop an iOS app that utilizes the Plant.id machine learning API for camera identification and tracks plant maintenance cycles.
- Utilized Xcode Interface Builder for storyboard navigation and data segues.
- Built a Parse database to store user information.

**PyNIDS** | *Python, socket, struct*

- Developed a Linux local area network intrusion detection system that scans a local network and warns the user of any suspicious IP's or ports, as well as displaying detailed packet info.
  - Utilized socket and struct libraries to manipulate network packet protocols and bytes into workable python objects.
- 

## LEADERSHIP

**Computer Science Society | Vice President, Computer Science Mentor**

May 2020 - May 2021

- Tutored students on various computer science topics during school community hours.
- Constructed and hosted regular workshops on software engineering concepts, web development, and python to give students real-world applicable cases of their computer science learnings.
- Founded the club's discord server (50+ members) with interactive channels to virtualize students' learning and social environment in distance-learning semesters, leading to a 63% increase in meeting attendance.
